

BizMetry is an enterprise-grade, low-code telemetry solution built for business-centric observability.

It captures KPIs from distributed systems and AI applications using lightweight agents, enabling technical and non-technical users alike to gain insights effortlessly.

BizMetry is an enterprise-grade, low-code telemetry solution built for business-centric observability.

It captures KPIs from distributed systems and AI applications using lightweight agents, enabling technical and non-technical users alike to gain insights effortlessly.

Custom KPIs

Define business metrics without relying on engineering teams.

Real-Time Dashboards

Visualize metrics and connected agents live.

AI Monitoring

Track precision, consistency and completeness of AI responses.

Seamless Integration

Connect any system through our open agent.

Structured ASBO Definitions

Define business entities, attributes and types with structured logic.

Metadata Import from Databases

Import schema metadata and generate entities directly from your data sources.

Template Inheritance

Create business-specific templates derived from master telemetry templates.

Dashboards and Reports

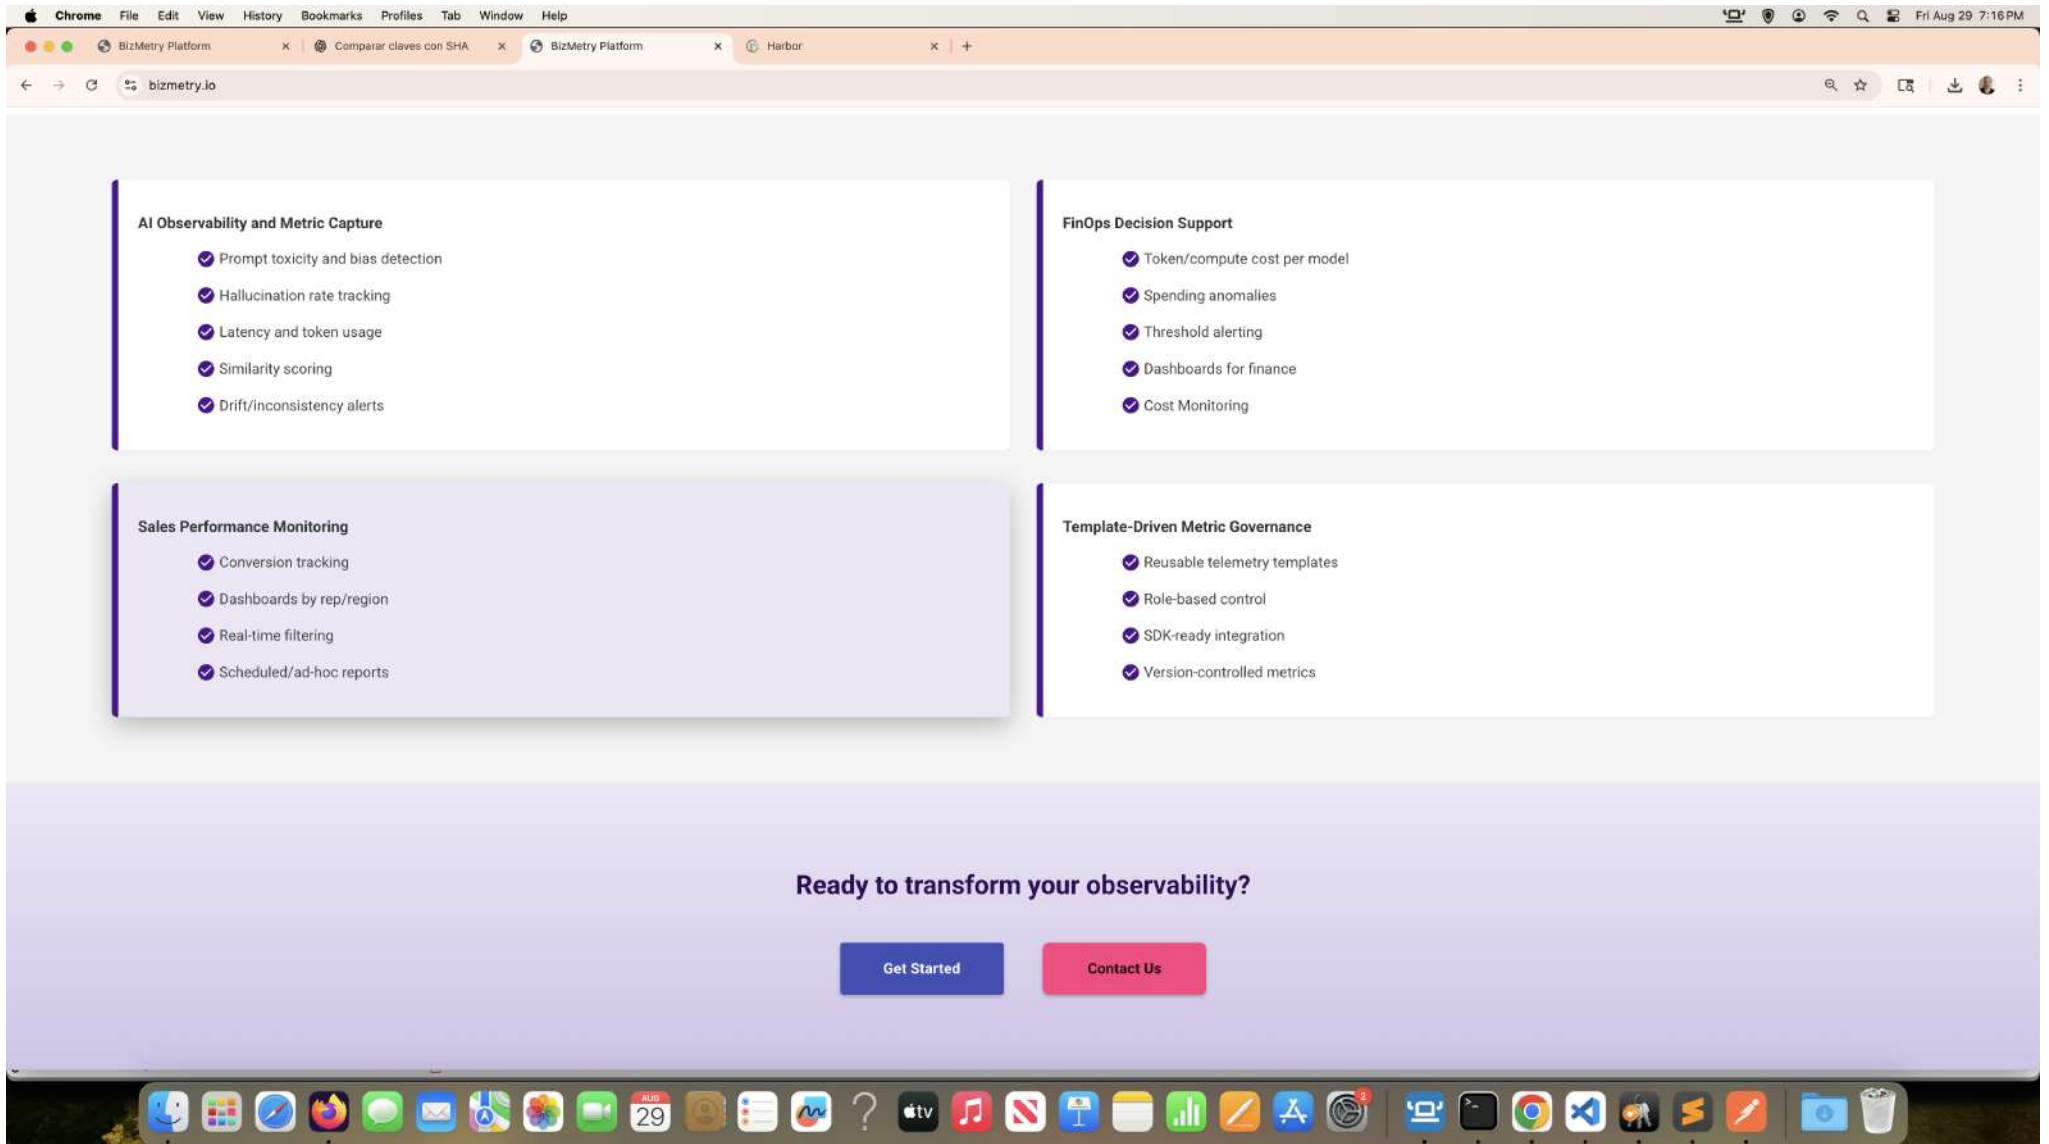

Generate real-time dashboards and export custom analytics reports.

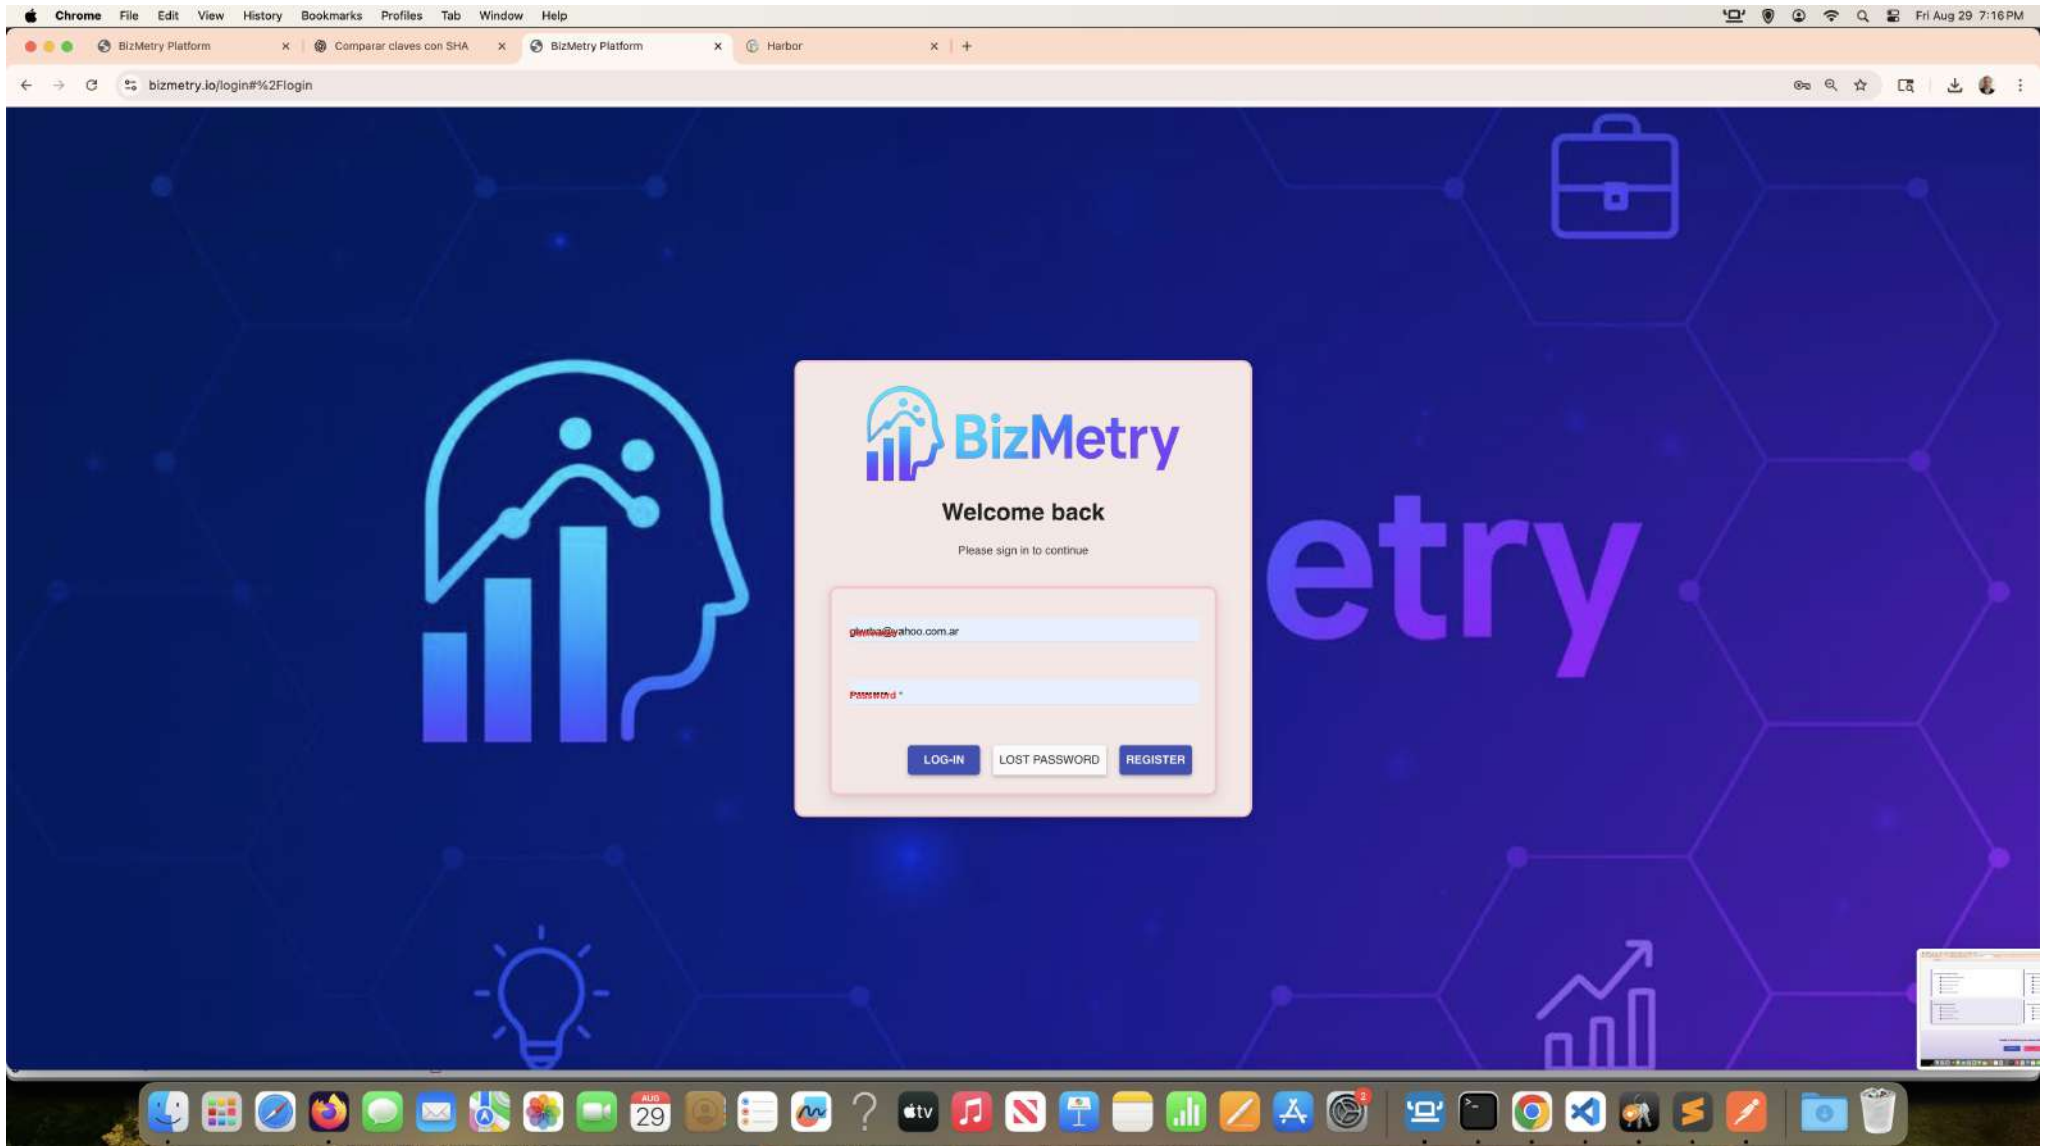

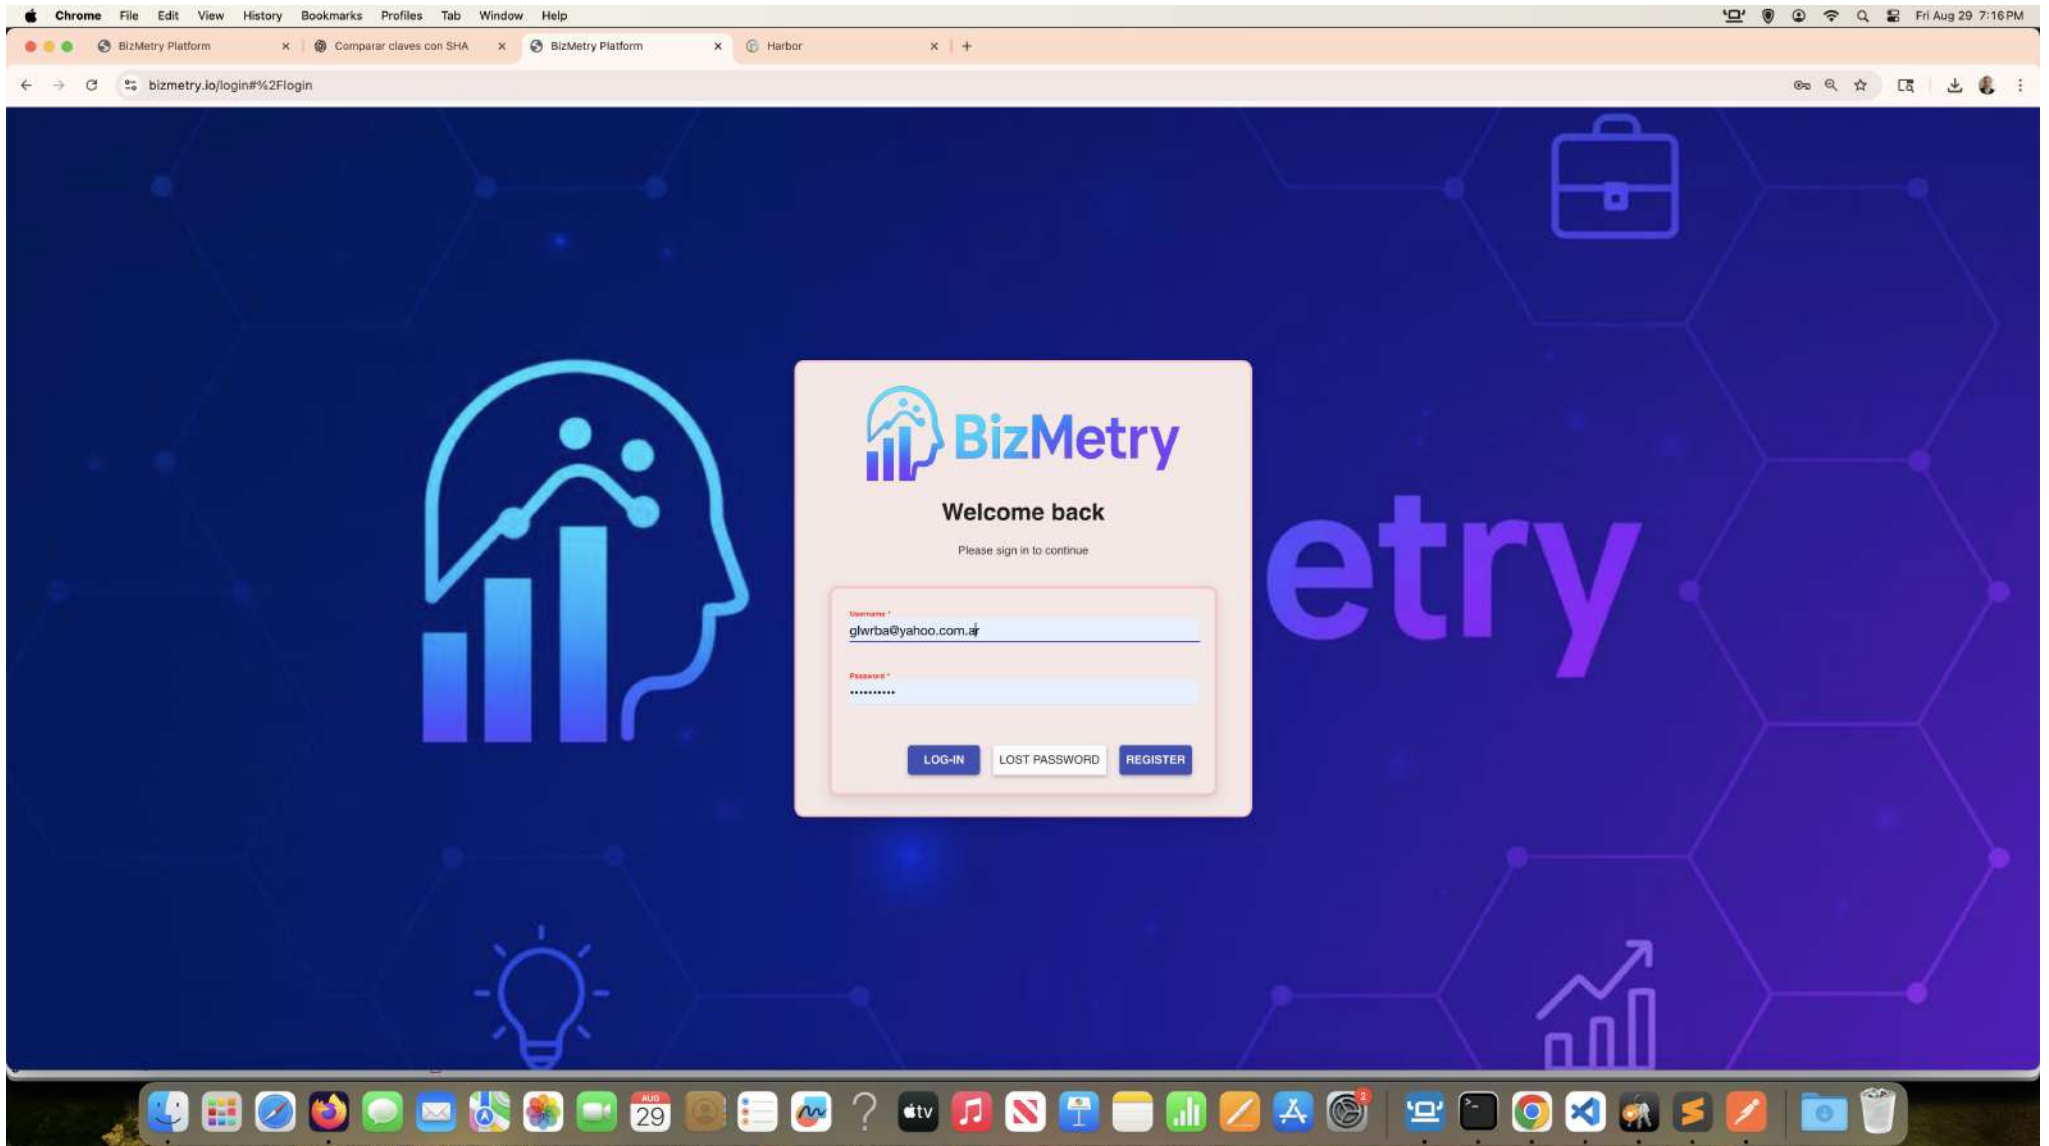

Central Agent Management

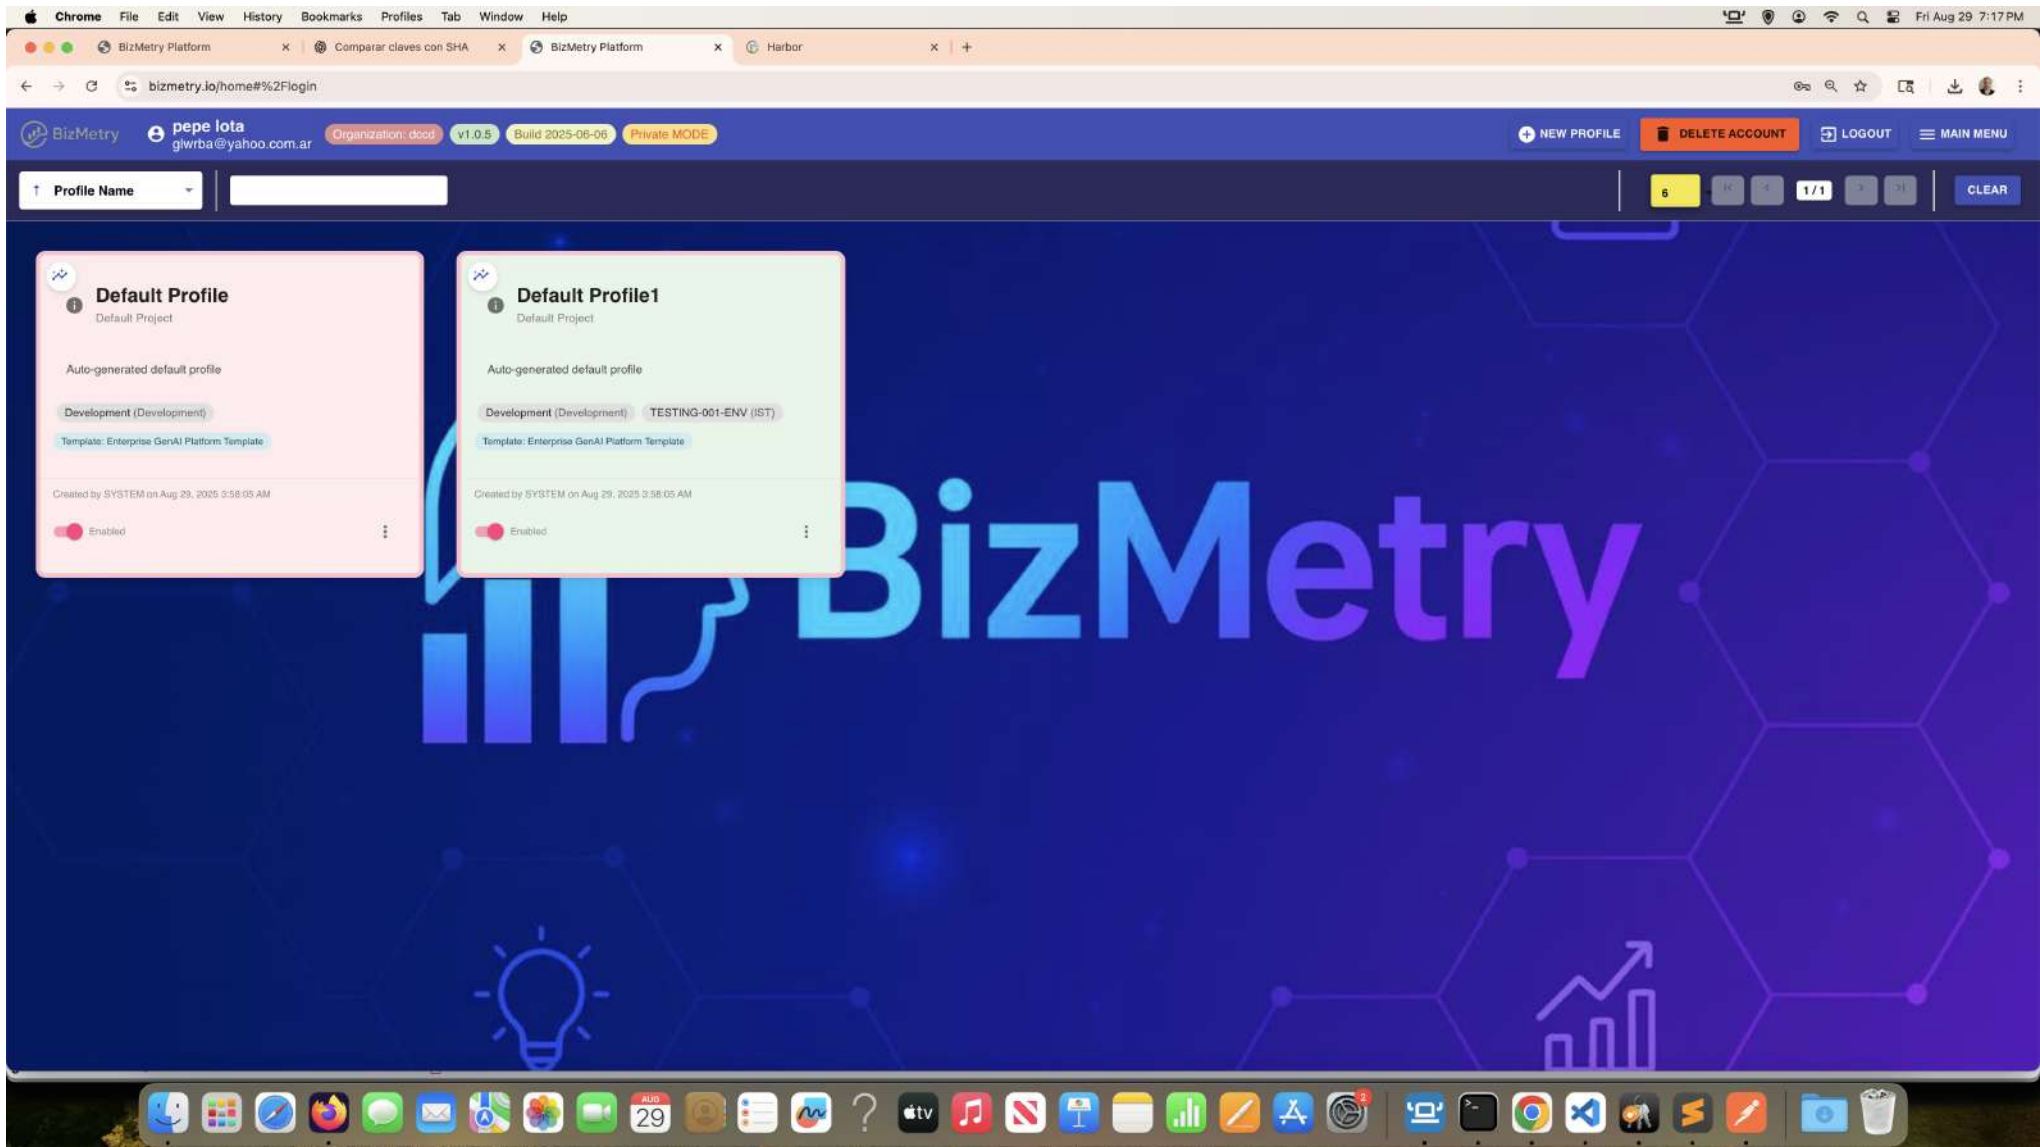

Deploy, monitor and control telemetry agents across all environments from a unified interface.
