Agentic Registry OSS

Guillermo Wrba
2/5/2026

Agentic Registry is an open-source initiative designed to offer a decentralized alternative to centralized agentic repositories for efficient registration of AI Agents and MCP Servers. It provides both registration and discovery capabilities, seamlessly integrating into your AI Agentic ecosystem.

The goal is to establish robust AI Agentic governance by ensuring that all agents are properly registered and centrally configured.

For your business's AI applications, the registry enables easy and quick access to available agents based on a variety of criteria. This allows smart bots and intelligent orchestrators to gain visibility of the resources within your AI Agent ecosystem, making it easier to find and utilize the right agents.

Agentic Registry is an open-source initiative designed to offer a decentralized alternative to centralized agentic repositories for efficient registration of AI Agents and MCP Servers. It provides both registration and discovery capabilities, seamlessly integrating into your AI Agentic ecosystem.

The goal is to establish robust AI Agentic governance by ensuring that all agents are properly registered and centrally configured.

For your business's AI applications, the registry enables easy and quick access to available agents based on a variety of criteria. This allows smart bots and intelligent orchestrators to gain visibility of the resources within your AI Agent ecosystem, making it easier to find and utilize the right agents.

Agentic Registry

MCP Servers

Register themselves against the registry, making them discoverable and usable by AI Agents.

Programmatically, via REST API integration from your own MCP Server

Via Agentic Registry UI

MCP Servers can be imported from OpenAI MCP Central

Register

Agentic Registry (Central Hub)

Register

AI Agents

AI Agent can register themselves against the registry, made available to external AI Applications for discovery and consumption.

Programmatically, via REST API integration from your AI Agent

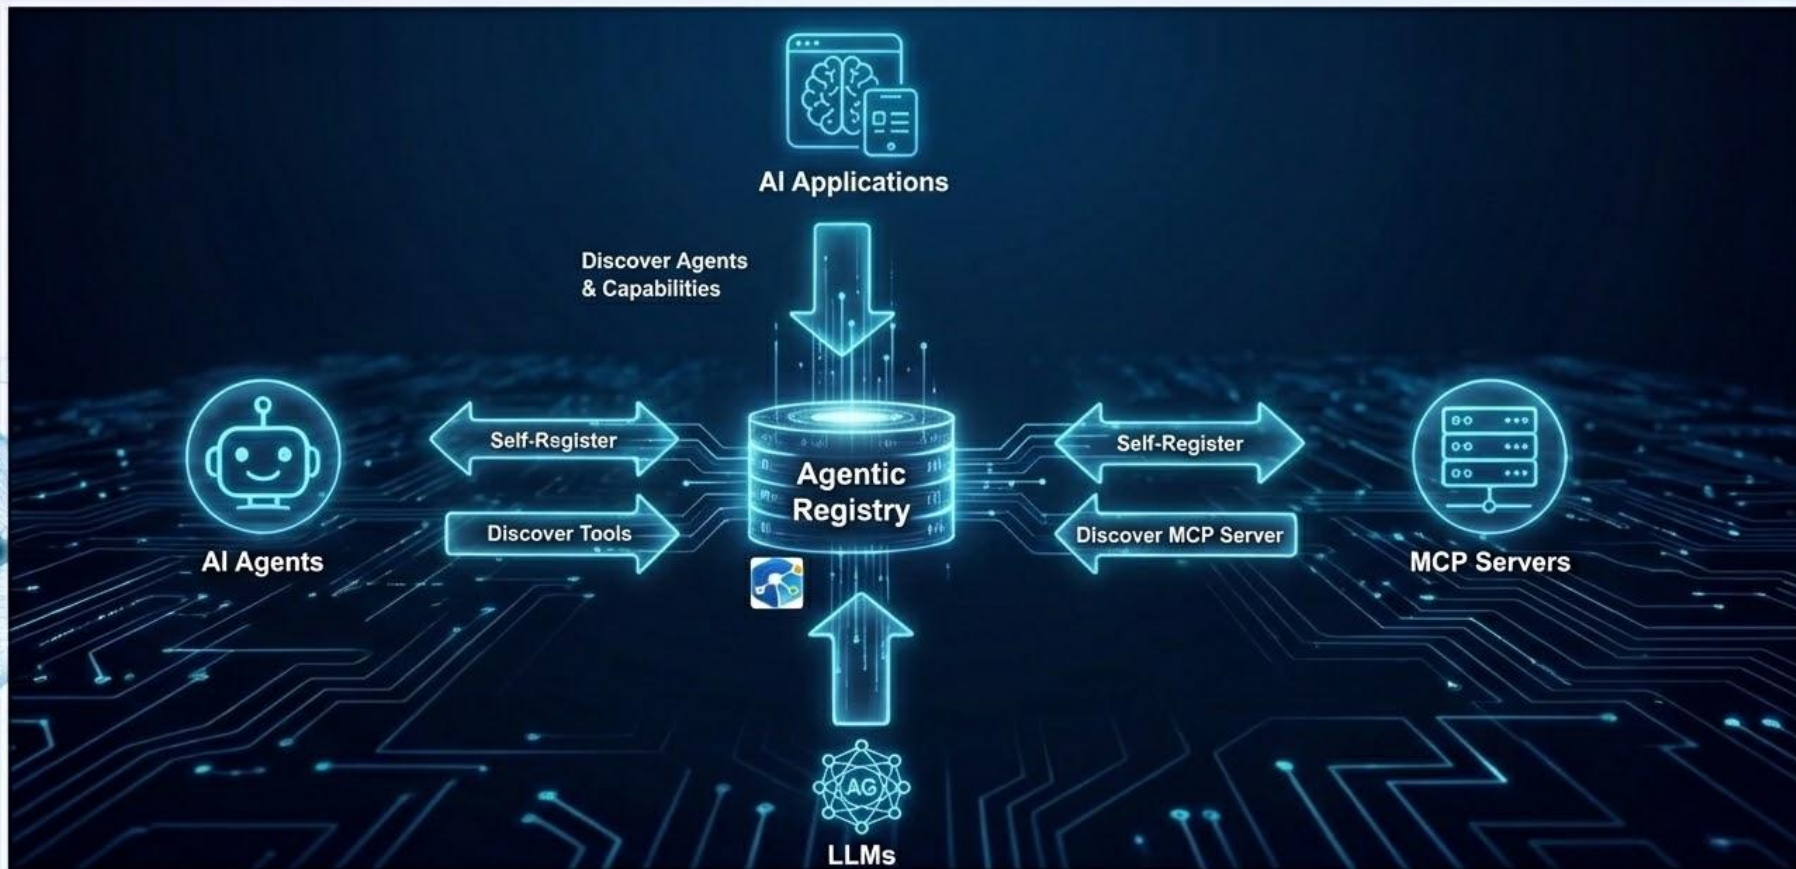

Via Agentic Registry UI

Discover & Consume

AI Applications & Smart Orchestrators

AI Applications and smart orchestrators from your business applications, can interact with the registry to discover existing AI agents and capabilities and consume them as needed.

• MCP Server Module

○ Agentic Integration

- Register MCP Servers via REST API
- Pulling MCP Server Snapshot via REST API

- Health-Check Monitoring of MCP Servers

○ UI-based Operations

- Create and Edit MCP Servers via UI
- Export an MCP Server definition in JSON format

- Import an already exported MCP Server Definition as a new MCP Server

- Import MCP Servers from MCP Central

- Delete an existing MCP Server definition along with its tools

- Inspect and invoke MCP Server associated tools

• AI Agent Module

○ Integration with AI applications

- Discovering available agents
- Registering AI Agents via REST API
- Health-Check Monitoring of AI Agents

○ UI-based Operations

- Create and Edit AI Agent definitions via UI

- Associating AI Models
- Associating endpoint
- Associating MCP Servers and Tools

- Deleting AI Agent Definition via UI
- Exporting Agent Definition
- Importing an already exported AI Agent Definition

Choose the import method

☒ Import from JSON file

☐ Import from MCP Central Registry

Select file

Choose a .json file exported from the MCP Server registry.

CHOOSE FILE...No file selected

CANCELIMPORT

The screenshot displays the Agentic Registry Admin interface. A modal titled "Import MCP Servers" is open, prompting the user to "Choose the import method". Two options are available: "Import from JSON file" (unselected) and "Import from MCP Central Registry" (selected). The modal lists two servers for selection:

- ai.alpic.test/test-mcp-server**
0.0.1
Alpic Test MCP Server - great server!
<https://test.alpic.ai/>
[SELECT](#)
- ai.appdeploy/deploy-app**
1.0.0
AppDeploy turns app ideas described in AI chat into live full-stack web applications
<https://api-v2.appdeploy.ai/mcp>
[SELECT](#)

At the bottom of the modal are "CANCEL" and "IMPORT" buttons. The background interface shows the "Registry Admin" header, a search bar, and a list of MCP servers, including "MCP Server 1" which is active and has a version of 1.0.

BizMetry

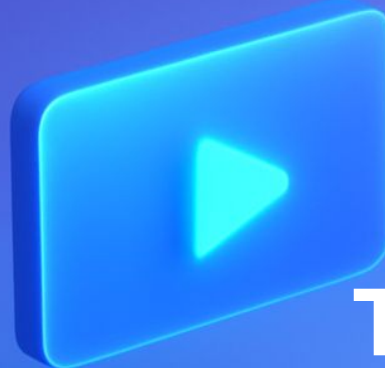

Trying it out and contributing

Guillermo Wrba
2/5/2026

- Agentic Registry OSS is open-source !!
- You can try it out by cloning the repository at <https://github.com/bizmetry/agentic-registry-oss>
- Follow the instructions given on the README file to spin it up and start trying it
- This is an open-source project, open for community contribution, which is very welcome to help growing and shaping the product towards an enterprise-grade solution
- If you want to contribute to the open source project, reach me out directly to guillermo.wrba@gmail.com,

Thank You !
